

"SPLICING DEVICE FOR SPLICING TWO WEB MATERIALS TOGETHER,
UNWINDER COMPRISING SAID SPLICING DEVICE AND RELATIVE
METHOD"

5

Abstract

The splicing device comprises two heads (41A, 43A; 41B, 43B), each of which has: a roller (33A; 33B) associated with a clamping bar (93A; 93B) to hold between said roller and said clamping bar an initial edge (L) of the second web material; a counter-pressure member (53A; 53B) cooperating with
10 said roller to press said first and second web materials against each other; and a cutting member (67A; 67B).
